Release PV710 SV101

The themes of this release are enhancements and bug fixes to Application Control Manager.

Prerequisites

- This solution is compatible with OneStream Platform v8.
- This release requires a minimum 7.1 Platform release.
- This release supports an over-install for previous releases. Any modifications to business rules, connectors, defaults Import Add-On components must be redone. Reach out to your OneStream Software representative for questions regarding the over-install process.
- OneStream strongly recommends uninstalling the UI for Application Control Manager before installation. Any modifications to business rules must be redone.

New

None

Enhancements

None

Fixed

- Export columns are no longer missing insert statements during the Load/Extract process. (MP4-3280).
- SSI no longer removes members with multiple flow dim assignments. (MP4-3338).
- Assigning a User Group property to your flow does not populates an error message. (MP4-3235).
- ACM_Reports Business Rule is no longer encrypted. (MP4-3345).

Known Issues

None

Release PV710 SV100

The themes of this release are enhancements and bug fixes to Application Control Manager.

Prerequisites

- This solution is compatible with OneStream Platform v8.
- This release requires a minimum 7.1 Platform release.
- This release supports an over-install for previous releases. Any modifications to business rules, connectors, defaults Import Add-On components must be redone. Reach out to your OneStream Software representative for questions regarding the over-install process.
- OneStream strongly recommends uninstalling the UI for Application Control Manager before installation. Any modifications to business rules must be redone.

New

- New ACM installer will setup tables and launce solution in one step. (MP4-2076).
- Import Add-On and seed file are included in the new installer accompanying this release. (MP4-2448).

Enhancements

- Added User Type property for Security Flows. (MP4-322).
- Enhanced Admin logging with additional fields. (MP4-2027).
- The items grid allows unlimited rows. A grid exceeding 4000 rows may impact application performance. (MP4-2288).
- Improved Source System Import performance. (MP4-2500, MP4-2502)

- Application Control Manager migration now supports OIS authentication. (MP4-2518).
- Updates may be processed for members with different varying selectors in the same row of data. (MP4-3016).

Fixed

- Email notification works with source system import or user-initiate requests. (MP4-99).
- Item grid shows all records in the source system import. (MP4-167).
- The special character apostrophe does not cause errors in the entity dimension transfer process. (MP4-232).
- Migration can add, update, and remove Varying properties during import. (MP4-233).
- Source System Import requests show the New value column on the item detail page for Add and Update before the commit. (MP4-250).
- Claiming a request to approve, then un-claiming that request without any action, will now stay on the "My Queue" tab. (MP4-294).
- Entity security group properties no longer revert to default while processing an update. (MP4-462).
- Processing a Source System Import Template with the same Dimension Member Name but different case formats than what is in the dimension library, now does not generate a line item. (MP4-699).
- Reference Entity Property includes the Security Properties when adding or updating an entity. (MP4-1225)
- When Multiple Items is not selected, creating the request will not cause a constraint error. (MP4-2053).
- Flow steps are not skipped when multiple dimensions are assigned to the Source Initiated Flow. (MP4-2058).
- Retain Source System Order reflects the value stored in the ACM configuration database table. (MP4-2059).
- Varying property Workflow Channel updates in the dimension library. (MP4-2062).

- When you fully uninstall the ACM solution, (ACM_View_MetadataHierarchy) is removed. (MP4- 2071).
- Security flow creates a security request without enabling Multiple Items in the flow. (MP4-2155).
- The UserGridRowsPerPage property updates in the OneStream Dimension Library when you commit the request. (MP4-2174).
- "Is Consolidated" for Entity (only) is now passing the correct option to the Dimension Library when using Source System Import. (MP4-2180).
- When you generate a request and add a supporting document, the request can be completed regardless of whether a username contains a space. (MP4-2361).
- Parent Member selector is available when the Multiple Items option is turned off. (MP4-2399).
- When copying a member with a different parent now commit correctly. (MP4-2416).
- Creating a UD Constraint as a numeric value now commit correctly. (MP4-2571).
- When committing a request with foreign unicode characters now updates the dimension library with the correct characters. (MP4-3005).
- Shared “None” members will not generate a line item if no changes are detected in the source. (MP4-3007).
- Member Formula has a max character length (MP4-3014).
- “Automated Request Audit with Item Detail” report missing 'MOVE' items (MP4-3062).
